

# Make Slime!

## You'll Need:

- Bottle of white or clear glue (Elmer's works great)
- Food coloring (optional)
- Borax powder

## Instructions:

- Step 1: Empty the glue bottle into the mixing bowl.  
Step 2: Fill the empty bottle with warm water and shake.  
Step 3: Add water to mixing bowl.  
Step 4: Add a few drops of food coloring.  
Step 5: Measure  $\frac{1}{2}$  cup of warm water into a plastic cup and add a teaspoon of Borax powder.  
Step 6: Stir the solution and don't worry if all of the Borax dissolves.  
Step 7: Start stirring the glue and water mixture in the bowl and slowly add a little of the Borax solution.  
Step 8: It's time to abandon the spoon and use your hands to mix. Continue to add the Borax solution until the slime reaches the perfect consistency.

## Mix it up:

Another option is to add an additional ingredient to the above recipe. Add either shaving cream (to make it slimy-shiny) or zinc sulfide (to make it glow).
